

Volume IV · Chapter 22 — State of the Art & Evaluation (text/image/video) · Labs

Source: split from med-tech-curriculum-V1.md (V1). From this split onward this chapter is maintained **independently** here. See Volume-IV-Chapter-22-context.md for the AI interaction log.

Prerequisites: Ch 10, Ch 15, Ch 19.

Learning outcomes — the student can: survey current medical LLM/multimodal/video SOTA honestly; design evaluation for book-derived models; assess source-fidelity and citation correctness; articulate maturity gaps.

Labs (hands-on) — 6 h:

#	Lab	h
22a	Fidelity eval: does the model's answer match the source book?	3
22b	Citation-correctness scoring on RAG answers	3

Datasets/tools: eval harness; the RAG/fine-tuned models built in Volume IV.

Assessment: SOTA briefing + fidelity eval (**60%**); citation-accuracy report (**20%**); quiz (**20%**). **Key decisions:** honest capability claims; which modality is production-ready; how to report limits. **References:** plan §6.3; §13 → *Medical LLMs*. **Hours:** Theory **8** + Lab **6** = **14**.
